```javascript
methods.UNKNOWN = async function(request) {
let path = urlPath(request.url);
// create path that return the request url.
let stats;
// create stats variable.
try {
stats = await stat(path);
// if it exists, return it
} catch (error) {
if (error.code != "ENOENT") throw error;
// if error code is not ENOENT, delete it.

else return {status: 204};
// else return false message
}
if (stats.isDirectory()) await rmdir(path);
// if path is a directory, delete path. Else unlink path.
else await unlink(path);
// return false message
return {status: 204};
};
```
